

MANAGED APPLICATION SERVICES

WHAT WE DO

Today's business landscape is more complex and requires Digital Transformation (DT) to remain competitive, improve enterprise performance and profits. DT can involve software development, ERP system implementation, system integration, business intelligence, implementing software automation solutions and much more.

Unfortunately, often due to "poor IT management" the ultimate goal of DT alone is short lived. Software solutions that are poorly supported or maintained expose your business to risk or are quickly abandoned by end-users, making your investment a complete waste of money. "Poor IT management" is often the result of employee turn-over, lack of expertise, inadequate tools, or ability to scale etc.

Hence the need to outsource and adopt Managed Application Services (MAS), making us an extension of your IT department. MAS provides a wide variety of application services; from development, maintenance, support, documentation, monitoring, modernizing, and managing key applications. MAS ensures your critical applications are stable, secure and always performing optimally. As your MAS provider, we continuously monitor your systems to make sure technical issues are handled proactively to avoid impacting your business continuity.

MANAGED APPLICATION SERVICES

Why Managed Application Services?

	Reduce business continuity risks.
	Software modernization to continually enhance your system performance and capabilities.
	Difficult to find the right talent and keep it.
	Reduce risk due to staff turn-over.
	Don't have to worry about compliance or end of life software libraries exposing your business to security breaches.
	Free up your staff so they can do more strategic work.
	Improve staff satisfaction and work progress by resolving issues in your backlog quickly.
	Save on cost as you don't have to build an expensive team of software experts.
	Avoid staff frustration due to slow response or resolution time due to lack of expertise or resources on staff.
